Eligibility: Civil Service Professional
Language:
- Filipino
- English

CHARACTER SUMMARY

I started freelancing in 2014 and my professional programming career in 2016, since then I have experienced working in various designations. I have supervised teams, lead and carry out operations and maintenance, as well as build and architect micro service applications.

Since the start of my professional programming career, I have worked with start-up companies in the Philippines and overseas while having several freelance projects on the mix.

Despite being a full-time employee, I still am looking for ways to further gain more knowledge about the latest technologies on the field.

I have found a keen interest with the concepts of *Artificial Intelligence* as well as *Machine Learning* which drove me to decide to find my way back to the academic realm of Information Technology and Computer Science.

AREAS OF EXPERTISE

Below are the fields I have been thoroughly focusing for the past years:

- Full Stack Programming which includes mobile, desktop, web, and competence on both back and front-end tools.

- Database management and big data optimization on both relational and non-relational data storage.

- System architecture and containerization with market grade tools (e.g. Dockers, Kubernetes, and Mesos).

CAREER HISTORY
